Subjective norm, tuition provider reputation, and intention to pursue the ICAEW qualification at a tuition provider: Evidence from Vietnam

Le Bich Tran, Pham Ngoc Duong, Pham Lam Duy Anh

The 4th International Conference on Accounting, Economics, Finance and Management (ICAEFM 2026)

Abstract

This paper examines the relationships between subjective norm, tuition provider reputation and learners' intention to pursue the ICAEW qualification in Vietnam, using T.A.D Learning as the empirical context. The analysis uses 268 valid survey responses collected in May 2026 and the original six-factor PLS-SEM model, with all six paths reported. Bootstrapping with 5,000 resamples shows positive and statistically significant relationships between subjective norm and intention ($\beta = 0.316$, $p < 0.001$) and between reputation and intention ($\beta = 0.321$, $p < 0.001$).
